Addicks Services, Incorporated

September 25, 2005

Attention: Jon Burst, CEO – International Fuel Technology, Inc

I have summarized the key points as to why Addicks Services, Inc. uses IFT's DiesolIFT fuel additive product:

1. Fuel Economy

Highway trucks: based on several months of testing, we realized a 6 to 10 percent improvement in fuel economy when using DiesolIFT. The variance in the percent range is due to the fact that our trucks haul various types of construction equipment ranging from ten thousand pounds to one hundred forty thousand pounds.

Off road equipment: based on several months of testing we realized a 4.5 to 8 percent improvement in fuel economy when using DiesolIFT. The additive was used in a variety of equipment: dozers, excavators, forty ton Cat/Terex trucks. Our test results had a wide variance due to the wide variety of the ground conditions encountered in the construction field.

2. Lubricity

Today's lower sulfur diesel fuel presents a number of problems in the fuel delivery system. Less sulfur means less lubricity. We believe the use of DiesolIFT has compensated for the reduced lubricity associated with low sulfur diesel. Bottom line, our equipment is running better and maintenance expense is down considerably.

3. Water Problems

Water in the fuel system, inherent in the use of any diesel equipment, causes equipment downtime for maintenance. For our crews, even an hour of down time has such an adverse effect on production company wide that the dollars lost are hard to calculate. We know since beginning our use of DiesolIFT, the downtime associated with water issues has been reduced considerably.

4. Smoke

We have no scientific evidence that use of DiesolIFT decreases smoke emissions. However, to a man in the field, they will all swear that since we began using DiesolIFT visible smoke emissions has been significantly reduced.

I would be pleased to speak to any potential user of the additive. They may contact me at either of my telephone numbers:
